

Conditional Execution

ma

- Example2
 - Income tax calculation
- Which one executes faster: example1 or example2 ?

}

Conditional Execution

- Turtle controller

```
main_program{  
    char command;  
    turtleSim();  
  
    repeat(100){  
        cin >> command;  
        if (command == 'f')  
        else if (command ==  
        else if (command ==  
        else cout << "Not a
```
